

# Weaponized Survival: A Weaponry Guide to Zombie Survival

By: Ivy Allen & Sarah Alleman

# Weapon 1: The Nureo Frost Bomb

## Prion Targeting Foam Grenade:

### Concept:

This weapon releases a foam infused with prion-degrading enzymes. When deployed, the foam expands rapidly, coating surfaces and potentially infected individuals. Enzyme

# Drone Decontamination:

## Concept:

A squadron of small drones equipped with injectors for delivering prion-degrading enzymes or UV-sterilizing lights could patrol affected areas and deliver treatment autonomously. These drones identify infected targets and administer prion-degrading agents directly to them.

## Use:

This drone squadron could be deployed into high-risk zones to reduce prion spread, freeing survivors from needing to enter dangerous areas directly.

Weapon 2: The  
Prion Pulsar
